### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-8, and 10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mizuno et al. USPN 5876325. Mizuno discloses an operation input device having a first movement detection unit for detecting the position and/or attitude of a first operation input unit; and a second movement detection unit connected to the first movement detection unit, for detecting the position and attitude of a second operation input unit (Abstract, Figure 1, col. 4, lines 36-46; col. 8, lines 60-67; col. 9, lines 14-17 and 33-55). The device further comprises an armrest unit, P and Q and movement detection units 16, 17 for detecting the position and attitude of an operation input unit with a part corresponding to the wrist of the operator. Mizuno discloses instruments 156 and 157 having two or more degrees of freedom (col. 18, lines 49-61). Mizuno does not specifically disclose at least three degrees of freedom and six degrees of freedom as claimed. However, because Mizuno discloses at least two degrees of freedom or more and in some components, such as the position sensors, six degrees of freedom (col. 25, lines 30-47), it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the first detection unit with the claimed degrees

of freedom and the second detection unit with the claimed degrees of freedom, since where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation, In re Aller et al. 105 USPQ 233.
